

5. Technical resources

Oil & Fuels Engineering LLC is a company that together with its Group has been designing, building, assembling and starting up turnkey modular refineries for over 20 years.

It also ensures and guarantees its customers the necessary training for managing the system.

For 20 years we have been building from scratch and turnkey mini-refineries, including plants for the production of bitumen and for the desulphurization of fuel oil and diesel.

The equipment is configured individually for each type of raw material. Before commissioning, the raw materials are analyzed and only then the equipment is configured. We are committed to processing oil in such a way that we produce virtually the entire range of petroleum products without waste. Our company also provides laboratories that monitor the quality of the resulting products.

The equipment we produce allows us to solve the problem of refining and storing oil in hard-to-reach places. At the same time, the authenticity and safety of the environment is maintained.

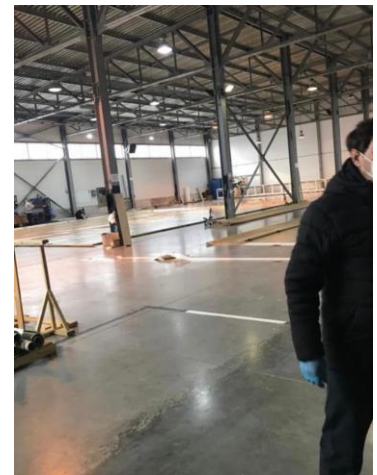

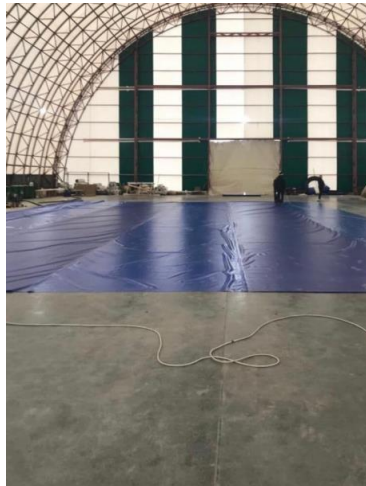

The production part of the company is located in Russia, in Armenia. The total production area is 7 hectares: 5 hectares in Russia and 2 hectares in Armenia. In the company the production structure is represented by a single unit and is not divided into different departments, since production is specialized and produces a limited range of products.

The production includes a department for electric welding, metal cutting, assembly and a warehouse.

The equipment is freely placed in the premises, there are convenient passages for personnel, there are special loading equipment and cranes. The equipment is selected taking into account the area required for passages, passages and movement of goods. Room height 12 m.

The company does not have its own transport fleet

The number of staff employed in production is 20 people. Among these 5 people are Engineering and Technical Management. The number of personnel involved in the installation and construction is 15 people.

The total cost of production equipment is \$30 million.

All equipment produced by OFE LLC is patented and has quality certificates.

Production is resistant to external factors (political and economic situation), adapts flexibly to changes and has stable long-term relationships with raw material suppliers.

Our company is committed to expanding the geography of sales markets and plans to develop outside the United Arab Emirates, Armenia and Russia.
